## EXPERIENCE

---

### OneFinOps — purchases, sales, banking, accounting

Feb 2026 – present

C# · .NET · React · SQL Server

I work across the finance side of the product: the procure-to-pay service that takes a purchase order through goods receipt, supplier bill, matching, withholding tax and payment; the sales, banking and accounting modules around it; and the React screens that drive them. The hard part is that every write moves money. A double-click, a retried request or two workers settling the same bill must never pay or post twice, and every undo has to reverse exactly what its original created in the ledger.

224 feature prs merged · 55 system reports · 5 integrations shipped

---

### Full-stack intern — two MERN applications

Jun – Oct 2024

React · Express · MongoDB · Gemini API

Two MERN applications from first commit to deployment; owned the performance work on both.

---

## SELECTED PROJECTS

---

### Infrastructure Tracker — where every asset is, live

Aug 2026

Next.js 16 · TypeScript · MongoDB · Mongoose · Auth.js · Tailwind · Zod

Where every asset is, who holds it, and what is about to fail. First built in college in 2024; rebuilt in 2026 as a self-hostable tracker for any organisation — campus, office, hospital, workshop — and deployed with a demo you can sign in to.

4 roles, building-scoped · 5 live dashboard numbers · 546 assets in the demo

---

### Résumé Builder — the first thing built, rebuilt and live

Aug 2026

Next.js 16 · TypeScript · MongoDB · Mongoose · Auth.js · Tailwind · Zod

A blank page is the hardest part of a résumé, so this one asks the questions instead — then renders the answers into any of four templates, previewed as the actual printed page. The first thing I ever built, in 2024, with HTML, CSS and JavaScript and no server; and the first thing I rebuilt, in 2026, with accounts, autosave and sharing.

4 templates, switch any time · A4 live preview, at print size · 1 share link per résumé, on or off

---

## DyslexAI — screening from handwriting and speech

May 2026

React · Python · FastAPI · OpenCV · EfficientNet-B0

Screening a child for dyslexia usually means waiting months for a specialist. This reads their handwriting and listens to them read, and says whether it's worth making the appointment.

2 modalities · 6 handwriting detectors · 5 speech metrics · 3 risk bands

---

## Connect — SOS, blood matching, ambulance dispatch

2025

React Native · Spring Boot · PostgreSQL · Express · MongoDB — Third place · 100+ teams

Three emergencies that don't wait — personal safety, blood supply, and ambulance dispatch — folded into one app instead of three places nobody checks.

4 safety triggers · 3 match criteria · 3rd of 100+ teams

---

### EDUCATION

---

## B.Tech, Artificial Intelligence & Machine Learning

Oct 2022 – May 2026

Aditya College of Engineering & Technology, Surampalem — CGPA 8.08

---

## Intermediate · BIEAP

Jun 2020 – May 2022

Vikas Junior College, Jangareddygudem — 89%

---

### CHART OF ACCOUNTS

---

**1000 · Languages** C# · TypeScript · Python · Java · Dart

**2000 · Frameworks** .NET · React · React Native · Spring Boot · Flutter · Next.js

**3000 · Data** SQL Server · PostgreSQL · MongoDB

**4000 · Platform** Kubernetes · Terraform · GitOps · CI / CD pipelines · ServiceNow

**5000 · Assurance** xUnit · Playwright · Vitest · Testcontainers

---

### CERTIFICATIONS

---

Azure AI Fundamentals Microsoft

Certified System Administrator ServiceNow

Certified Application Developer ServiceNow

### PRACTICE

---

**230+** Problems solved

LeetCode and GeeksforGeeks

**41** Public repositories [github.com/Praveen8104](https://github.com/Praveen8104)
